### **DETAILED ACTION**

1. Applicant's amendment filed on 07/27/2009 has been considered and entered for the record.

### **Preliminary Remarks**

2. Applicant's amendment overcomes the objection to the drawings in paragraph 7 of the Office Action mailed on 05/28/2009.
3. Claims 13-28 are pending further examination upon the merits.

### ***Information Disclosure Statement***

4. The information disclosure statement (IDS) submitted on 07/27/2009 has been considered by the examiner.

### ***Drawings***

5. The drawings submitted on 05/17/2005 are acceptable.

### **REASONS FOR ALLOWANCE**

6. Claims 13-28 which have been re-numbered 1-16 are allowed.
7. The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach or fairly suggest a method of culturing a photosynthetic microorganisms that includes injecting the microorganism into a first culture region followed by the steps of irradiating the culture region and harvesting the microorganism.

Furthermore, the prior art fails to teach or fairly suggest the use of a multi-layered bioreactor that includes two separate culture regions separated by a transparent barrier thus isolating each region.

8. The closest prior art of record is Wilkinson (US 6,571,735 B1) which discloses an airlift bioreactor that uses an external light source to heat the culture medium within the bioreactor. Further, the bioreactor includes ports for loading and removing liquid from the reactor and a diffuser for introducing air into the interior of the reactor. However, Wilkinson is silent regarding a second partitioned area of the reactor for cultivating a metabolite in one compartment where this metabolite is used to cultivate a second photosynthetic microorganism.

9. The next closest prior art of record is Louvel (US 5,897,997) which discloses a reactor for cultivating a biomass that includes a primary chamber for treating and cultivating the biomass and a second compartment that is part of the exterior of the reactor that filters the treated liquid and sends this treated liquid to either a second reactor or a storage vessel. The reactor of Louvel can also be made of glass in order to allow an operator to observe the reaction taking place within. However, while the reactor of Louvel does include a second compartment that is part of the exterior of the reactor, this compartment is used for the filtration of the liquid from the primary chamber and is not used for a secondary reaction. Finally, the steps employed by Louvel to treat and cultivate the biomass do not disclose using both compartments in parallel as disclosed by the instant application.

10. Therefore, the combined teachings of Wilkinson and Louvel fail to teach or fairly suggest an airlift bioreactor that includes divided compartments where one compartment cultivates a metabolite derived from a first microorganism and a second compartment that uses this metabolite in order to cultivate a biomass.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
